

WhatsApp Automation & Template Reference

Everything that answers a lead automatically, every approved template and what it says, how many messages you may send, and how to wire this to Meta ads so a consultation booking is the default outcome rather than a lucky one.

Field	Value
Sending number	+91 79784 60386 (Heal Thyroid With Swapnil)
Phone number ID	1238533092683765
WhatsApp Business Account	976081968452524
Funding	Visa ****9002 attached, no shared credit line
Status / quality	CONNECTED / GREEN, display name APPROVED
Webhook	https://www.swapnilumbarkarfitness.in/api/whatsapp-webhook
Approved templates	6
Document generated	17 August 2026

Read this first: the two channels are not the same

Everything in this document falls into one of two buckets, and confusing them is the single most expensive mistake you can make.

SERVICE WINDOW (she messages first): free, unlimited, no template, no approval, replies within 24 hours of her last message. This is what the auto-reply below uses.

BUSINESS-INITIATED (you message first): requires an approved template, costs money, and is capped by your messaging tier. A quiz-abandoner who never wrote to you falls here.

1. The auto-reply system

When a woman messages +91 79784 60386, her message is matched against nine intents in the order below. First match wins, so the order is deliberate: the intents whose mis-fire is most expensive sit at the top. If nothing matches she gets the fallback, never silence.

Setting	Value	What it does
WHATSAPP_AUTOREPLY	on	Master switch. Blank or unset = nothing is ever auto-sent.
WHATSAPP_AUTOREPLY_COOLDOWN_HOURS	12	If anything went out to her in the last 12 hours - a bot reply, or you typing in the admin inbox - the bot stays quiet. Stops it talking over a live conversation.

Two intents are **TERMINAL**: after they fire, the bot never auto-replies to that contact again, permanently. Re-engaging someone who said stop is a Meta policy problem, not merely a rude one.

1. optout — **TERMINAL**, bot goes silent for this contact forever

Triggers on: stop, unsubscribe, do not message, dont message, band karo, mat bhejo

Understood - I will not send you any more messages. If you ever want help with your thyroid weight, just message here and I will reply personally. All the best.

2. handoff — **TERMINAL**, bot goes silent for this contact forever

Triggers on: talk to swapnil, speak to swapnil, call me, human, real person, aap kaun, baat karni, baat karna, phone karo

Swapnil here - I read every message myself. Give me a few hours and I will reply to you personally with something specific to your case.

3. price

Triggers on: price, cost, fees, fee, charge, how much, kitna, kitne, paisa, rupees, payment, expensive, afford

The 1-on-1 Thyroid Consultation is Rs 299. In 60 minutes I go through your reports, your food and your routine, and tell you the exact blocker keeping your weight stuck - plus your 90-day plan. If you leave without clarity on your blocker, you get the Rs 299 back.

The 3-month coaching programme is quoted only on the call, after I have seen your case. No pressure either way.

Start with the free 2-minute quiz: <https://www.swapnilumbarkarfitness.in/assessment>

4. booking

Triggers on: book, booking, appointment, slot, schedule, consultation, call kab, time, available, kaise book, kab milega

Happy to help you book. The quickest way: take the free 2-minute quiz first so I can see your case before we speak, and the booking page opens right after it.

<https://www.swapnilumbarkarfitness.in/assessment>

If you would rather see how the call actually works first, this page shows a real one step by step: <https://www.swapnilumbarkarfitness.in/how-it-works>

5. quiz

Triggers on: quiz, score, test, assessment, link, form

Here is the free 2-minute quiz - it narrows down which blocker is yours:

<https://www.swapnilumbarkarfitness.in/assessment>

No payment needed to take it. Your result comes up straight away.

6. guide

Triggers on: guide, pdf, blocker, 3 reasons, three reasons, ebook, book bhejo, send guide

Here it is - the 3 reasons a thyroid body stops losing weight, all on one short page:

<https://drive.google.com/file/d/1kCbCKxmvEC3kHQGKwUyZjsAxUdfn-HbD/view>

Read it and tell me which one sounds like you.

7. medication

Triggers on: medicine, medication, tablet, thyronorm, eltroxin, levothyroxine, dawa, goli, tsh, report, blood test, already taking

Good - keep taking it exactly as your doctor prescribed. Coaching works alongside your medication and your doctor, never instead of them.

Here is the thing most women are never told: the tablet manages your hormone level, it does not rebuild the metabolism around it. That gap is why your TSH can be 'in range' while the weight will not move.

Find which gap is yours in 2 minutes: <https://www.swapnilumbarkarfitness.in/assessment>

8. diet

Triggers on: diet, food, meal, khana, roti, what to eat, diet plan, recipe, nutrition, gym, workout, exercise

No crash diets and no cutting out Indian food - home-cooked roti-sabzi built for a thyroid body, and 30-40 minutes of joint-friendly movement that fits a working day.

But which of those two is actually blocking YOU is the part that has to be worked out for your case, not guessed.

2-minute quiz to narrow it down: <https://www.swapnilumbarkarfitness.in/assessment>

9. results

Triggers on: results, kitna weight, how much weight, kg, proof, testimonial, genuine, real, scam, trust, guarantee

Fair question. Real clients, real numbers: Heenal lost 15 kg in 90 days, Namrata 16 kg, Vaidehi 12 kg - all with thyroid problems. Individual results vary, and I will not promise you a number before seeing your case.

You can watch their videos and read their messages here:
<https://www.swapnilumbarkarfitness.in/>

And the 2-minute quiz is free: <https://www.swapnilumbarkarfitness.in/assessment>

Fallback — when nothing matches

Triggers on: anything else, including an empty or whitespace-only message.

Hi, Swapnil here. Thanks for messaging.

If your weight will not move despite trying, it is usually not willpower - it is one specific blocker. There are 3 common ones, and I put all 3 on one short page for you:

<https://drive.google.com/file/d/1kCbCKxmveC3kHQGKwUyZjsAxUdfn-HbD/view>

Which one sounds like you?

Guardrails built into every reply

No reply ever tells a woman to stop or reduce her medication. The medication intent explicitly says "alongside your medication and your doctor, never instead of them" - this is enforced by an automated test that fails the build if the wording drifts.

No reply promises a guaranteed weight-loss number. Named client results always carry "Individual results vary".

Every reply is plain ASCII. This pipeline has mangled non-ASCII characters before, and a garbled reply reads worse than a plain one.

2. Approved templates

These are business-initiated messages: use them to reach a woman who has NOT written to you in the last 24 hours. All six are approved on WABA 976081968452524 and, now that the account has a working card, they actually deliver - previously they were accepted by Meta and silently dropped.

Template	Category	Status	Use it when
blocker_video	MARKETING	APPROVED	First touch to a cold lead. Sends her to the how-it-works page showing a real consultation.
medication_blocker	MARKETING	APPROVED	She is on thyroid medication and stuck. Leads with symptoms she recognises.
welcome_lead	MARKETING	APPROVED	Immediately after a new lead is captured.
payment_reminder	MARKETING	APPROVED	She started the Rs 299 checkout and did not finish. Your quiz-abandoner message.
slot_on_hold	MARKETING	APPROVED	Scarcity nudge - her slot is held but not confirmed.
booking_confirmation	MARKETING	APPROVED	After payment clears and the call is booked.

Two of these are in the wrong category, and it will cost you delivery

payment_reminder and booking_confirmation are both MARKETING. They should be UTILITY.

MARKETING templates are subject to a per-user frequency cap Meta does not publish, and to marketing opt-outs - a woman who ever tapped "Stop promotions" for any business stops receiving yours. Those messages are accepted by the API and then dropped. That is exactly the silent failure you just spent days escaping on the old account.

UTILITY templates skip both, cost less, and deliver more reliably. A payment reminder for a checkout she started and a confirmation of a call she booked are both transactional, not promotional.

Fix: WhatsApp Manager > Manage templates > select the template > request re-categorisation to UTILITY.

Template body: blocker_video

Variable {{1}} is her first name. The template carries a URL button labelled "Find My Blocker" pointing at the how-it-works page.

Hi {{1}}, Swapnil here [emoji]

Rashmi was eating less, doing cardio, even intermittent fasting – and her weight still wouldn't move.

On her 1-on-1 consultation call we found the EXACT blocker keeping her weight stuck. She had no idea it existed.

Watch how her call worked, step by step – and see how we'd find YOUR blocker (₹2,000 call, today ₹299):

<https://www.swapnilumbarkarfitness.in/how-it-works>

[emoji] marks a waving-hand emoji in the live template; this document's font cannot draw it.

The other five bodies are not in this document

I have their names, categories and approval status, but not their exact text - it lives only in the templates-backup.json file on your Mac.

Send me that file and I will regenerate this PDF with all six bodies printed verbatim, so this becomes the single reference you can hand to anyone who writes messages for you.

3. How many messages you can send

The answer depends entirely on who starts the conversation. This is the part most people get wrong when planning ad spend.

She messages you first

Unlimited, and free. Her message opens a 24-hour service window. Inside it you may send free-form text with no template, no approval and no per-day cap. Nothing you do here counts against any tier. This is what the auto-reply in section 1 runs on.

You message her first

Requires an approved template, costs money per conversation, and is capped by your messaging tier. The tier counts UNIQUE customers you start a conversation with in a rolling 24 hours - not total messages.

Tier	Unique customers per 24 hours	How you get there
Unverified business	250	Default when business verification is incomplete.
Tier 1	1,000	Business verified.
Tier 2	10,000	Automatic, on sustained volume with good quality.
Tier 3	100,000	Automatic, same basis.

Check your exact tier at WhatsApp Manager > Account tools > Messaging limits. The API returns null for this field because Meta gates WABA-level fields to Business Solution Provider apps - that is a permission ceiling, not a fault, so read it in the UI.

Volume is not your constraint. Category and opt-outs are.

Even the lowest tier, 250 unique recipients per day, is far beyond your current lead flow. You are not going to hit it.

What will actually cost you delivered messages is sending transactional follow-ups under a MARKETING category, where per-user caps and marketing opt-outs apply. Fix the two categories in section 2 and your quiz-abandoner flow gets materially more reliable - without touching your tier at all.

4. Wiring this to your Meta ads

You have two routes from an ad to a consultation booking. They behave very differently, and the one you are planning is the harder of the two.

Route A - Lead ad or landing page, then quiz (what you are running now)

She clicks the ad, lands on the site, takes the quiz, and either pays the Rs 299 or does not. If she does not, she has never messaged your WhatsApp - so reaching her needs a TEMPLATE, which costs money, counts against your tier, and can be blocked by a marketing opt-out you cannot see.

Step	Channel	Cost	Can it be blocked?
She fills the quiz	Your site	-	-
She does not pay	-	-	-
You follow up	payment_reminder TEMPLATE	Paid per conversation	Yes, if MARKETING and she opted out
She replies	Service window opens	Free from here	No

Route B - Click-to-WhatsApp ad

She taps the ad and WhatsApp opens with a message pre-filled. The moment she sends it, a 24-hour window opens and every reply after that is free, instant, uncapped, and cannot be blocked by a marketing opt-out. Your auto-reply answers her immediately - price, booking, medication, whichever she asks - and the quiz link goes out inside that conversation rather than before it.

Step	Channel	Cost	Can it be blocked?
She taps the ad	WhatsApp opens pre-filled	-	-
She sends it	Service window opens	Free	No
Auto-reply answers	Free-form, instant	Free	No
Quiz link + booking	Inside the conversation	Free	No

Recommendation

Run both, but treat Click-to-WhatsApp as your primary for consultation bookings.

Route A makes you fight the template system for every single lead who does not pay - paying per message, burning tier, and losing an unknown fraction to opt-outs you never find out about.

Route B makes every lead open her own free channel on first contact. Your automation is already built for exactly this, and it is currently doing the harder job of the two. The quiz still runs - it just happens one step later, after she has already spoken to you, which is also where qualification is cheapest.

5. Operating reference

Environment variables (Vercel)

Variable	Value
WHATSAPP_PHONE_NUMBER_ID	1238533092683765
WHATSAPP_WABA_ID	976081968452524
WHATSAPP_AUTOREPLY	on
WHATSAPP_AUTOREPLY_COOLDOWN_HOURS	12
WHATSAPP_TOKEN	Sensitive - cannot be read back. Never paste it anywhere.
WHATSAPP_VERIFY_TOKEN	Webhook handshake only.

Editing a variable changes nothing until you REDEPLOY. Vercel bakes values in at build time, so the running deployment keeps the old value forever otherwise. This is the step that is easiest to skip.

Admin endpoints

Endpoint	What it answers
GET /api/admin/wa-account	Is the number live? Quality, status, templates, token identity, warnings.
GET /api/admin/templates?wabald=...	Every template with status and category. Add &full=1 for bodies.
GET /api/admin/wa-migrate?destinationWabald=...	Read-only preflight across two WABAs. Numbers, IDs, webhooks.
POST /api/admin/wa-migrate	migrate / register / subscribe. Each needs an exact confirm string.

All require the x-admin-key header.

Health check

```
KEY='<your admin key>'; SITE='https://www.swapnilumbarkarfitness.in'

curl -s -H "x-admin-key: $KEY" "$SITE/api/admin/wa-account" | python3 -m json.tool | head -12

# Expect: "id": "1238533092683765"
# "status": "CONNECTED"
# "qualityRating": "GREEN"
```

Open items

Priority	Item
High	Rotate exposed credentials: the two-step verification PIN, ADMIN_DASH_KEY, the hardcoded fallback in app/api/admin/_lib.ts line 11, and WHATSAPP_VERIFY_TOKEN. All four appear in chat transcripts or screenshots.

Priority	Item
High	Re-categorise payment_reminder and booking_confirmation to UTILITY.
Medium	Fill the phone profile: description, email and both website fields are empty. Use WhatsApp Manager, not Business Settings - the Done button there does not save.
Medium	Test the opt-out path: message "stop" from a number that has not written before. It should reply once and then never again.
Medium	Remove the Make integration's full-control partner access on WABA 976081968452524.
Low	Send yourself payment_reminder and confirm it arrives. That is the capability the old account silently lost.
Low	Confirm META_TEST_EVENT_CODE is NOT set in Vercel Production - if set, every conversion event goes to the test stream and Meta optimises on nothing.
